PROFESSIONAL SUMMARY

Motivated B.Tech graduate in AI & Data Science with hands-on industrial training at **Hexaware Technologies** as a Java Full Stack Developer, where I designed and deployed containerized backend systems using Spring Boot and Docker. I bring a strong foundation in backend architecture, CI/CD workflows, and infrastructure thinking — combined with a natural drive to break down complex systems and identify failure points before they happen. Currently transitioning focus toward **DevOps Engineering**, with working knowledge of Docker, Git-based CI/CD pipelines, and AWS fundamentals. Eager to contribute as a fresher in a DevOps or Cloud Infrastructure role where critical thinking and engineering discipline matter.

TECHNICAL SKILLS

DevOps & Cloud: Docker, Docker Hub, Git, GitHub Actions (CI/CD basics), AWS (EC2, S3 — fundamentals), Linux CLI

Backend & APIs: Java, Spring Boot, Spring Security, JWT Authentication, REST APIs, FastAPI, Node.js

Databases: MySQL, H2 Database, MongoDB, SQL

Frontend: React.js, Vite

Other: Python, C++, OOP, Data Structures & Algorithms, Manual Testing, Edge Case Analysis, System Design Basics

INDUSTRIAL TRAINING

Hexaware Technologies — Java Full Stack Developer Training

2025

Industrial Training | Full-Time, Structured Program

Coimbatore, Tamil Nadu

- Completed an intensive, industry-grade training program at Hexaware Technologies covering Spring Boot, React, Spring Security with JWT, role-based access control, and REST API design under a senior industry trainer.
- Delivered a full production-style capstone project (**FastX**) as the training case study, applying real-world backend patterns including layered architecture, service-repository separation, and Docker containerization.
- Deployed the Spring Boot backend as a Docker image to Docker Hub ([naveenlm3223/fastx-backend](#)), gaining hands-on experience with containerization workflows.
- Practised Git-based version control, debugging under review pressure, and writing maintainable code aligned with enterprise coding standards — directly applicable to DevOps and infrastructure collaboration.

PROJECTS

FastX — Bus Booking System | *Spring Boot, React/Vite, Spring Security, JWT, MySQL, Docker* Hexaware Training Capstone

- Built a full-stack bus booking platform (modelled after RedBus) with role-based access for PASSENGER, OPERATOR, and ADMIN roles — demonstrating multi-tier system design and access control logic.
- Implemented JWT authentication and Spring Security configuration from scratch, including stateless session management and secured API endpoints.
- Designed complete booking flow: seat selection, booking confirmation, operator dashboards, and PDF ticket download — covering backend business logic end-to-end.
- **Containerized the Spring Boot backend using Docker** and pushed the production image to Docker Hub, simulating a real deployment pipeline.
- Debugged complex integration issues including MySQL/H2 config switching, Spring Security filter chain conflicts, and React/Vite CSS rendering bugs — strengthening systematic troubleshooting skills critical for DevOps roles.

NIKKI AI — Wikipedia Assistant | *Python, FastAPI, React.js, REST API*

Personal Project

- Designed a backend-driven information retrieval system with FastAPI, handling request validation, routing, and structured error responses.
- Built and integrated a React frontend to consume REST APIs, improving understanding of service-to-service communication — a core DevOps concern.

Smart Issue Tracker & Test Case Management | *Python, FastAPI, MongoDB, REST API*

Personal Project

- Built a backend system to manage software issues and workflow states with CRUD APIs, validation logic, and status-transition rules.
- Focused on clean code architecture, edge case handling, and structured reporting — skills that translate directly to infrastructure monitoring and incident management.

E-Commerce Web Application | MongoDB, Express.js, React.js, Node.js (MERN)

Academic Project

– Developed a modular full-stack application with authentication, role-based access, and API-driven product management — reinforcing backend and API design fundamentals.

WORK EXPERIENCE

CDW India

Software Intern

– Contributed to the redevelopment of an internal tracking system used by 125+ employees, implementing new features and optimizing backend workflows — reducing operation time by 15–20%.

– Gained practical exposure to frontend-backend API integration in a production environment.

Emglitz Technologies

Data Scientist Intern

– Refactored Python scripts for performance and readability; designed logic-driven pricing models and built structured data outputs to support engineering decisions.

Imagecon Pvt. Ltd.

IoE Engineer Intern

– Debugged embedded software modules; worked with low-level communication protocols (I2C, UART) and validated sensor data flows — building a foundational instinct for systems-level thinking.

EDUCATION

Sri Krishna College of Engineering and Technology

B.Tech — Artificial Intelligence and Data Science | GPA: 8.0 / 10

Coimbatore, Tamil Nadu

Aug 2023 – May 2026

CERTIFICATIONS

- Python Essentials 1 — Cisco Networking Academy
- Artificial Intelligence Foundation — Infosys Springboard
- MongoDB Basics and Document Model — MongoDB Inc.
- Introduction to Cybersecurity — Cisco Networking Academy

KEY STRENGTHS FOR DEVOPS

Systems Thinker: Naturally breaks down complex workflows into layers — identifying bottlenecks, failure points, and dependencies.

Containerization Ready: Practical Docker experience from FastX deployment; understands image building, tagging, and pushing to registries.

Debugging Under Pressure: Resolved integration-level bugs across Spring Security filter chains, database config conflicts, and build tools during review-critical training sprints.

Fast Learner with Execution Bias: Learns by building from scratch, iterating quickly, and repeating until the concept becomes second nature.
